Quarterly Market Review
First Quarter 2017

# **Quarterly Market Review**

First Quarter 2017

Well, the first quarter of 2017 is in the books, and to say it was eventful would be an understatement. Donald Trump was sworn in, and the fireworks have not let up. The market hasn't seemed to mind one bit, though, as it pushed through to new highs with gains across the board.

Initially, the gains following the inauguration were thought to be a result of confidence in the new administration's ability to quickly get a number of legislative changes pushed through, including a replacement for Obamacare, comprehensive tax law changes, and an infrastructure spending bill.

However, it quickly became clear that those changes, if they were to be agreed upon at all, were going to take much more time to enact. Such delays, along with a host of other world events – the most pressing of which was the heightened rhetoric and maneuvering with respect to North Korea and their nuclear threat – would have typically caused disruption in the market. Curiously, that hasn't happened yet.

The outcome of the French election is next up on the docket of things for the market to digest. As you will be reminded in the pages that follow, though, it's best to keep your focus on your long-term objectives, and let the market do as it pleases in the near-term.

# **Investment Shock Absorbers**

First Quarter 2017

Ever ridden in a car with worn-out shock absorbers? Every bump is jarring, every corner stomach-churning, and every red light an excuse to assume the brace position. Owning an undiversified portfolio can trigger similar reactions.

You can drive a car with a broken suspension system, but it will be an extremely uncomfortable ride and the vehicle will be much harder to control, particularly in difficult conditions. Throw in the risk of a breakdown or running off the road altogether, and there's a real chance you may not reach your destination.

In the world of investment, a similarly bumpy and unpredictable ride can await those with concentrated and undiversified portfolios or those who constantly tinker with their allocation. Of course, everyone feels in control when the surface is straight and smooth, but it's harder to stay on the road during sudden turns and ups and downs in the

market. For that reason, the smart thing to do is to diversify, spreading your portfolio across different securities, sectors, and countries. That also means identifying the right mix of investments (e.g., stocks, bonds, real estate) that aligns with your risk tolerance.

Using this approach, your returns from year to year may not match the top performing portfolio, but neither are they likely to match the worst. More importantly, this is a ride you are likelier to stick with.

Here's an example. Among developed markets, Denmark was number one in US dollar terms in 2015 with a return of more than 23%. But a big bet on that country the following year would have backfired, as Denmark slid to bottom of the table with a loss of nearly 16%.<sup>1</sup>

It's true that the US stock market (by far the world's biggest) has been a strong performer in recent years. But a decade before, in 2004 and 2006, it was the second worst-performing developed market in the world.<sup>1</sup>

Predicting which part of a market will do best over a given period is tough. US small cap stocks were

among the top performers in 2016 with a return of more than 21%. A year before, their results looked relatively disappointing with a loss of more than 4%. International small cap stocks had their turn in the sun in 2015, topping the performance tables with a return of just below 6%. But the year before that, they were the second worst with a loss of 5%.<sup>2</sup>

If you've ever taken a long road trip, you'll know that conditions along the way can change quickly and unpredictably, which is why you need a vehicle that's ready for the worst roads as well as the best.

First Quarter 2017

(continued) While diversification can never completely eliminate the impact of bumps along your particular investment road, it does help reduce the potential outsized impact that any individual investment can have on your journey.

With sufficient diversification, the jarring effects of performance extremes level out. That, in turn, helps you stay in your chosen lane and on the road to your investment destination.

Happy motoring and happy investing.
