Quarterly Market Review  
Second Quarter 2018

# Quarterly Market Review

Second Quarter 2018

The first half of 2018 ended on a mixed note, as the second quarter produced gains for US equity investors, but losses for their international counterparts. A similar mixed bag could be found in the fractional returns for fixed income investors.

As we outlined in our recent letter about the potential risks of a trade war, the coming weeks and months might very well define the tipping point in terms of market sentiment. On page 3, we are including an interesting chart that depicts the seven most recent periods of economic expansion in the United States.

The first thing to note is how long these cycles typically last. The most durable one, which began in 1991, lasted 10 years. Right now, we are in year nine of the current expansion. Next, please note the three instances where the president and congress enacted substantial legislation in an attempt to boost the economy. Each of these three instances – the Reagan tax cuts of 1981, the GW Bush tax cuts of 2003, and the Obama stimulus of 2010 – came at the very early stages of economic recovery.

All of the above should be taken into context when examining the potential impact of the tax cuts and fiscal stimulus package recently passed by president Trump and congress.

# Quarterly Market Review

Second Quarter 2018 (continued from page 2)

As the chart indicates, it is unprecedented to implement such stimulus measures so late into an economic expansion. If nothing else, the deficit spending that will result runs the risk of overheating the economy and causing a dramatic uptick in inflation.

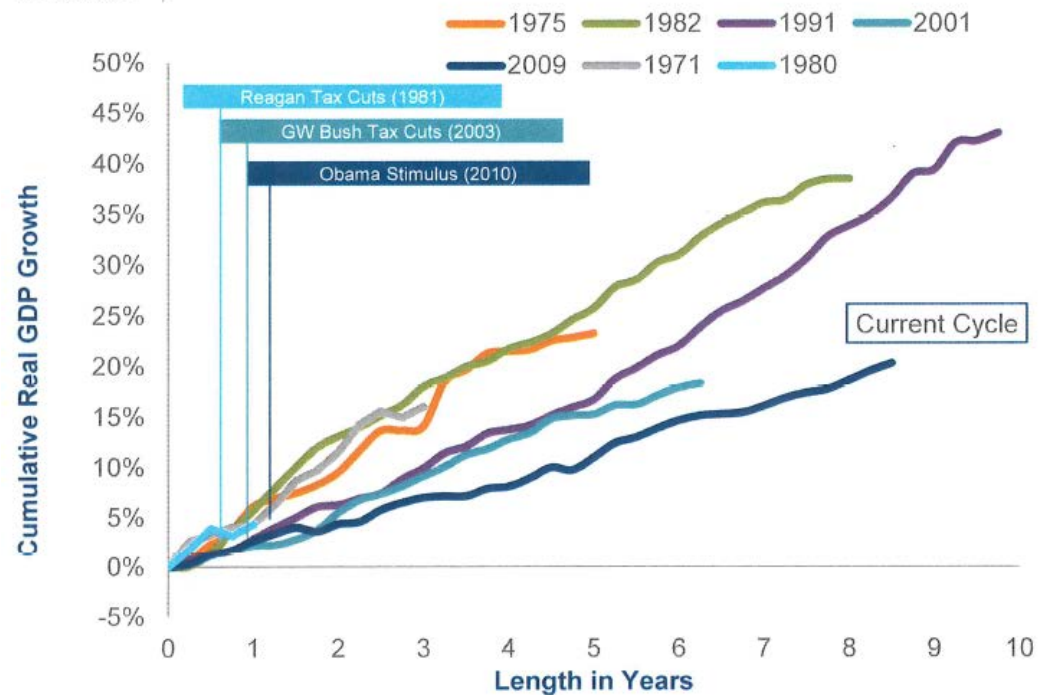

Add to the mix the possibility of an all-out trade war, which in and of itself would cause prices on all sorts of consumer goods to increase, and we are inclined to take a more cautious approach with equity investments during the second half of the year.

Hopefully, the rhetoric over tariffs will end up being nothing more than that, with cooler heads prevailing before new policies have the impact that is feared by most economists.

In the meantime, go out and have fun this summer, and leave the worrying to us!

# E+R=O, a Formula for Success<sup>1</sup>

Second Quarter 2018

Combining an enduring investment philosophy with a simple formula that helps maintain investment discipline can increase the odds of having a positive financial experience.

*“The important thing about an investment philosophy is that you have one you can stick with.”*

David Booth

Founder and Executive Chairman  
Dimensional Fund Advisors

---

## AN ENDURING INVESTMENT PHILOSOPHY

Investing is a long-term endeavor. Indeed, people will spend decades pursuing their financial goals. But being an investor can be complicated, challenging, frustrating, and sometimes frightening. This is exactly why, as David Booth says, it is important to have an investment philosophy you can stick with, one that can help you stay the course.

This simple idea highlights an important question: How can investors maintain discipline through bull markets, bear markets, political strife, economic instability, or whatever crisis du jour threatens progress towards their investment goals?

Over their lifetimes, investors face many decisions, prompted by events that are both within and outside their control. Without an enduring philosophy to inform their choices, they can potentially suffer unnecessary anxiety, leading to poor decisions and outcomes that are damaging to their long-term financial well-being.

When they don't get the results they want, many investors blame things outside their control. They might point the finger at the government, central banks, markets, or the economy. Unfortunately, the majority will not do the things that might be more beneficial—evaluating and reflecting on their own responses to events and taking responsibility for their decisions.

**e+r=o**

Some people suggest that among the characteristics that separate highly successful people from the rest of us is a focus on influencing outcomes by controlling one's reactions to events, rather than the events themselves. This relationship can be described in the following formula:

**e+r=o (Event + Response = Outcome)**

Simply put, this means an outcome—either positive or negative—is the result of how you respond to an event, not just the result of the event itself. Of course, events are important and influence outcomes, but not exclusively. If this were the case, everyone would have the same outcome regardless of their response.

Let's think about this concept in a hypothetical investment context. Say a major political surprise, such as Brexit, causes a market to fall (event). In a panicked response, potentially fueled by gloomy media speculation of the resulting uncertainty, an investor sells some or all of his or her investment (response). Lacking a long-term perspective and reacting to the short-term news, our investor misses out on the subsequent market recovery and suffers anxiety about when, or if, to get back in, leading to suboptimal investment returns (outcome).

To see the same hypothetical example from a different perspective, a surprise event causes markets to fall suddenly (e). Based on his or her understanding of the long-term nature of returns and the short-term nature of volatility spikes around news events, an investor is able to control his or her emotions (r) and maintain investment discipline, leading to a higher chance of a successful long-term outcome (o).

---

1. Jack Canfield, *The Success Principles: How to Get from Where You Are to Where You Want to Be* (New York: HarperCollins Publishers, 2004).

# E+R=O, a Formula for Success<sup>1</sup>

(continued from page 14)

This example reveals why having an investment philosophy is so important. By understanding how markets work and maintaining a long-term perspective on past events, investors can focus on ensuring that their responses to events are consistent with their long-term plan.

## THE FOUNDATION OF AN ENDURING PHILOSOPHY

An enduring investment philosophy is built on solid principles backed by decades of empirical academic evidence. Examples of such principles might be: trusting that prices are set to provide a fair expected return; recognizing the difference between investing and speculating; relying on the power of diversification to manage risk and increase the reliability of outcomes; and benchmarking your progress against your own realistic long-term investment goals.

Combined, these principles might help us react better to market events, even when those events are globally significant or when, as some might suggest, a paradigm shift has occurred, leading to claims that “it’s different this time.” Adhering to these principles can also help investors resist the siren calls of new investment fads or worse, outright scams.

## THE GUIDING HAND OF A TRUSTED ADVISOR

Without education and training—sometimes gained from bitter experience—it is hard for non-investment professionals to develop a cogent investment philosophy. And even the most self-aware find it hard to manage their own responses to events. This is why a financial advisor can be so valuable—by providing the foundation of an investment philosophy and acting as an experienced counselor when responding to events.

Investing will always be both alluring and scary at times, but a view of how to approach investing combined with the guidance of a professional advisor can help people stay the course through challenging times. Advisors can provide an objective view and help investors separate emotions from investment decisions. Moreover, great advisors can educate, communicate, set realistic financial goals, and help their clients deal with their responses even to the most extreme market events.

In the spirit of the  $e+r=o$  formula, good advice, driven by a sound philosophy, can help increase the probability of having a successful financial outcome.
